4/24/2023 5:41:16	Drawing backgrounds with pixel colors	On Hold	Add a background! Pixels can be placed in the background in the same way as in the foreground. Also, some pixels stitch the foreground and background together. The reason why I proposed this feature is that sandboxels is a 2D game and 2D has some limitations. I hope they add it, but feel free to drop this idea if it makes the game laggy. (I used a translation tool for this sentence. If the meaning is difficult to understand, I will post the original sentence as well.) Sorry for the long post.	Gameplay feature (Anything else)

4/24/2023 9:47:17	Climbing bugs	On Hold	Creatures. They are, well, kind of annoying. But thats not the point I want to make. Pretty much, most animals are limited in terms of movement. It would be better tho if certain animals could climb, specifically ants, termites, and snails (excluding slugs). When I mean climb, I mean move around on and attach to pixels like they can on flat land. Also, one more thing. as you know, ants form colonies. But that would be too much to implement now. Just try to make it that ants and termites can create small but bigger than 1 wide tunnels. Thank you!	New reaction (Interaction between pixels, or phase changes)
